

The graph displays four curves on a light gray background. The y-axis has six tick marks without numerical labels. The x-axis has a single label '3 ms' at the bottom center. All curves start at the same baseline on the left. The green curve rises most steeply, followed by the blue curve, then the orange curve, and finally the red curve. Each curve reaches a plateau at a different level, with the green curve reaching the highest plateau and the red curve reaching the lowest plateau. The curves are smooth and continuous.
